Center for Human Genetic

Development Genetics and Birth defects

Refer to Thompson / Thompson 8th Edit Chapter 14

Framework

- Rationale in medical genetics
- Tool I: Registry - Epidemiology - Database
- Tool II: Definitions and Nosology
- Tool III: Distinct approaches
 - Dysmorphology
 - Syndromology

Rationale in medical genetic

*Clinical geneticist seeks a consistent approach
to lead to the diagnosis in a patient with birth defect*

Aims

diagnostic assessment
more precise delineation on natural history
follow-up and prognosis
open to precise genetic counselling

- Evidence derived from

Embryology: chronologic and stepwise mechanisms leading
to ab-/normal development

Epidemiology - Population Genetics

Animal models

Prediction tools

Registries and Databases

Tool I - Congenital Anomalies Registry

Specific public health problem indicators EUROCAT

tribute to Professor Yves Gillerot

Central Registry – Project Management Committee
Reliable, Available and Comparable on quantitative or qualitative parameters - Dataset Registries

EUROCAT is a European network of population-based registries for the epidemiological surveillance of congenital anomalies

The JRC-EUROCAT Central Registry maintains the EUROCAT Central Database

The database is dynamic, and is updated bi-annually with data from over 40 registries

The JRC-EUROCAT Central Registry reports and disseminates on a dedicated website updated data on the surveillance of congenital anomalies

The following information is provided: prevalence for **104** congenital anomaly subgroups, prenatal detection rates for **18 selected subgroups of congenital anomalies**, and **perinatal mortality associated with congenital anomalies**

<https://op.europa.eu/en/publication-detail/-/publication/cc2ffa13-d854-11ea-adf7-01aa75ed71a1/language-en>

2020

Tool I - Congenital Anomalies (CA) Registry

The Objectives of EUROCAT

- provide essential epidemiologic information on CA in Europe
- facilitate the early warning of new teratogenic exposures
- evaluate the effectiveness of primary prevention
- assess the impact of developments in prenatal screening
- act as an information and resource center for the population health professionals and managers regarding clusters or exposures or risk factors of concern
- provide a ready collaborative network and infrastructure for research related to the causes and prevention of congenital anomalies and the treatment and care of affected children
- act as a catalyst for the setting up of registries throughout Europe collecting comparable and standardised data

EUROCAT Network

Overview of the EUROCAT network, its organisation and committees

Member Registries

Information about the EUROCAT member registries, coverage and how to apply for membership

Data and surveillance

European Monitoring of Congenital Anomalies: JRC-EUROCAT Report on Statistical Monitoring of Congenital Anomalies (2008 - 2017)

Abstract: Worldwide, congenital anomalies are a leading cause of fetal death, infant mortality and morbidity in childhood. According to the EUROCAT estimates, of the 5.1 million births in the European Union (EU) each year approximately 127,000 (2.5%) have a congenital anomaly. EUROCAT is a European network of population-based registries whose objectives are to provide essential epidemiologic information on congenital anomalies in Europe, to facilitate the early warning of new teratogenic exposures and to evaluate the effectiveness of primary prevention. Each year, EUROCAT performs statistical monitoring for both trends and clusters in time on 84 anomaly subgroups. The results of the statistical monitoring are the basis for instigating possible further investigations at the local registry level. The present report shows the results of the monitoring performed on data for the birth years 2008-2017 by the JRC-EUROCAT Central Registry. Cases of congenital anomaly among livebirths, fetal deaths from 20 weeks gestational age and terminations of pregnancy for fetal anomaly following prenatal diagnosis at any gestational age were included. We report both the statistical results and, where available, the outcome of the preliminary investigations conducted by registries.

EUROCAT Prevalence Data Tables

Cases and prevalence (per 10,000 births) of all congenital anomaly subgroups for all registries, from 2011 - 2015

Anomaly	LB N	FD N	TOPFA N	LB+FD+TOPFA N	LB+FD+TOPFA Rate	Excluding Genetic Conditions	
						LB+FD+TOPFA N	LB+FD+TOPFA Rate
All Anomalies	59179	1433	14619	75231	253.31 (251.51 - 255.13)	60392	203.35 (201.73 - 204.98)

Networks of action for 'Rare diseases'*

- have been supported under the Program for Community Action on Rare Diseases in 1999-2003; the EU Public Health Program 2003-2007 and the second EU Health Program 2008-2013

The aims

- **improve exchange of information** via existing European networks
- **promote better classification**, develop strategies and mechanisms for exchanging information between people affected by a rare disease volunteers and professionals
- **define relevant health indicators**
- **develop comparable epidemiologic data at EU level**
- **support and exchange of best practice**
- develop measures for patient groups
- network and infrastructure for research into the causes and prevention of congenital anomalies and treatment/ care of affected children
- survey policies and practices with regard to periconceptional folic acid supplementation

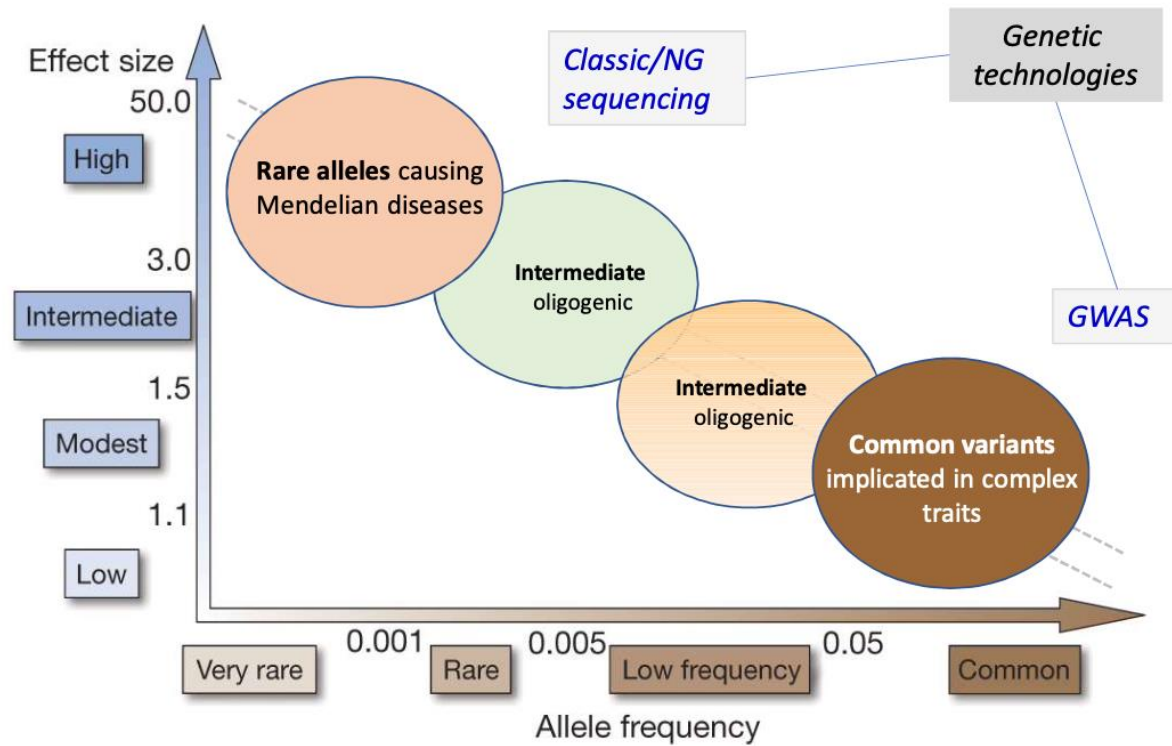

Rare diseases - definition

Rare diseases impact

- >80% with genetic origin
- Early onset , lifelong burden
- Difficult to diagnose and treat
- Often multisystemic – alter QOL
- Impact on social environment
- Fragmented support and research

Rare diseases – *The basics*

Manolio et al. Nature 461, 2009

Rare diseases – not limited to a concept

Belgisch plan voor
zeldzame ziekten

Plan belge pour les Maladies Rares

Bruxelles,
décembre 2013

TABLE DES MATIERES

Introduction

Domaine 1: Diagnostic et information au patient

Action 1: Remboursement des tests nécessaires au diagnostic et au suivi des maladies rares, effectués en Belgique ou à l'étranger

Action 2: Système de qualité au sein des centres de génétique humaine

Action 3: Introduction d'une consultation de conseil génétique dans les centres d'expertise pour maladies rares

Action 4: Consultation multidisciplinaire

Action 5: Communication centrée sur le patient

Action 6: Europlan

Domaine 2: Optimalisation des soins

Action 7: Concentration de l'expertise et renforcement des centres de référence pour pathologies rares spécifiques existants : introduction d'un coordinateur de soins

Action 8: Création de centres d'expertise pour l'hémophilie

Action 9: Fonction maladies rares

Action 10: Réseaux maladies rares

Action 11: Nouveaux centres d'expertise

Action 12 : Alimentation médicale pour maladies rares

Action 13: Communication rapide des besoins médicaux : utilisation du dossier patient multidisciplinaire informatisé

Action 14: Unmet medical need

Action 15: Inventaire des besoins non couverts

Domaine 3: Connaissances et information

Action 16: Registre central des maladies rares

Action 17: Orphanet Belgium

Action 18: Formation des prestataires de soins

Action 19: Codification et terminologie

Domaine 4: Gouvernance et durabilité

Action 20: Evaluation et monitoring du Plan

EUROPEAN JOINT PROGRAMME
RARE DISEASES

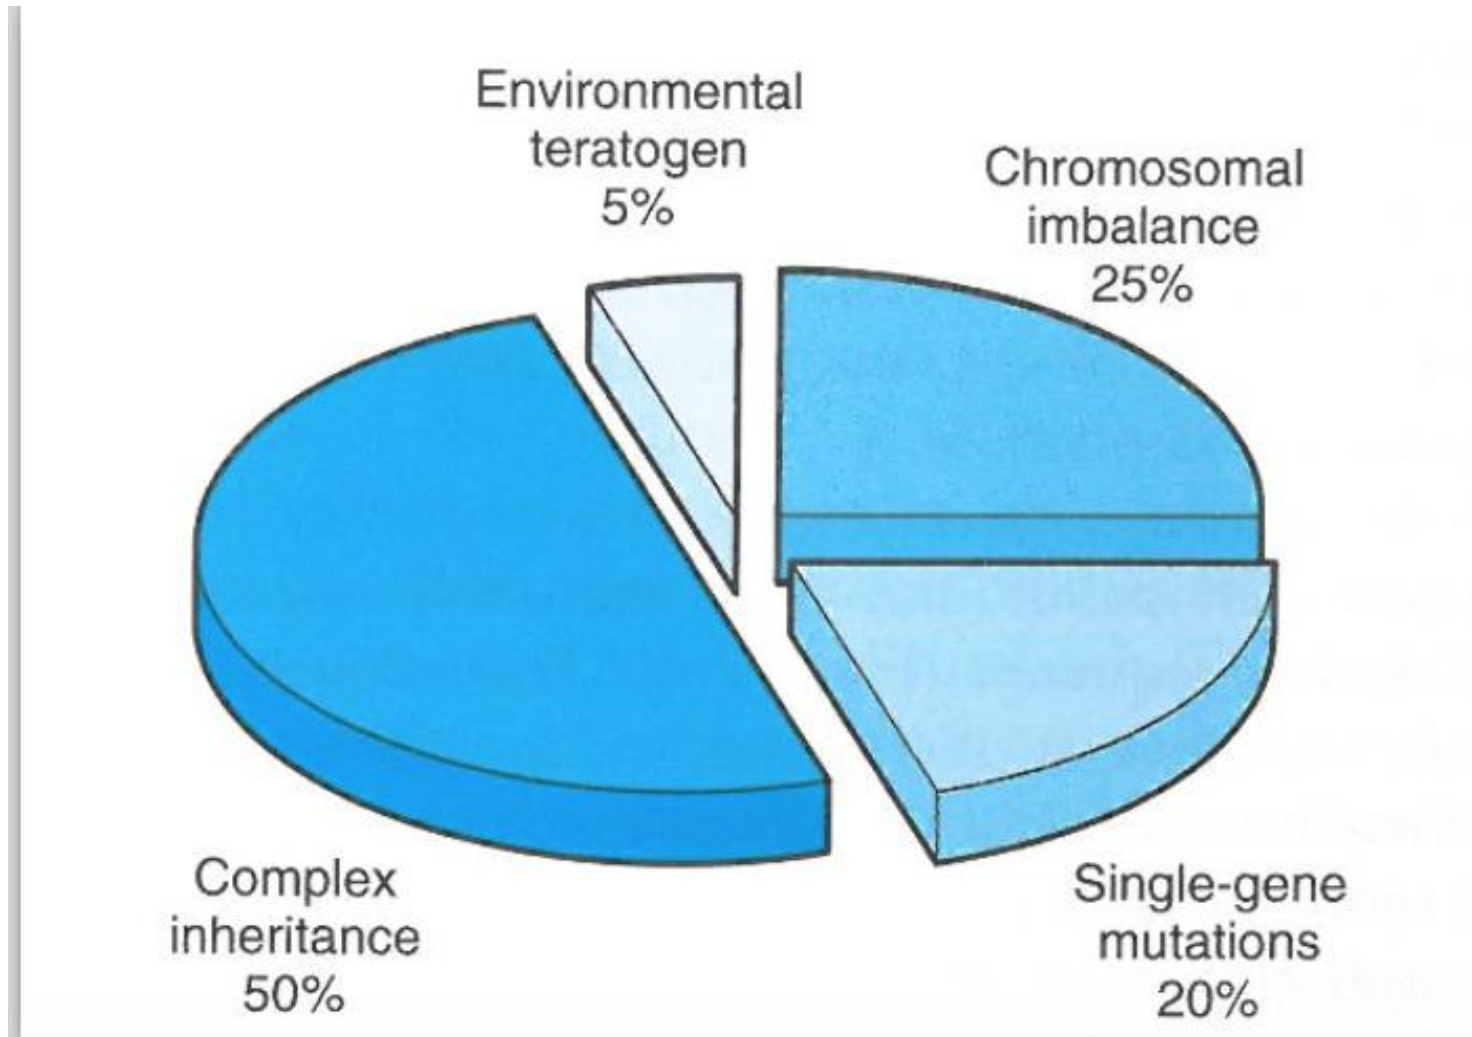

Birth defect - congenital anomaly

- Prevalence – 3%

Birth defect – 'main categories'

Tool II - Birth defect - Nosology

- **Deformation** consequence of extrinsic factors that modify/alter physical devlpt (histology nl)
- **Disruption** destruction of irreplaceable fetal tissue (vascular, trauma, teratogen)
- **Dysplasia** abnormal shape, structure, composition and/ or histology during devlpt ectoderm structure and derivates leading to a wide range of phenotype bone/skelettal
- **Malformation** result from intrinsic abnormalities in one or more genetic program operating during development (e.a polydactyly)

Illustration

(a)

(b)

(c)

(d)

(e)

(f)

Box figure 14.1 – Clinical photographs of the main types of dysmorphic features.

(a) Cleft lip, a **malformation** representing failure of fusion of components of upper lip.
(b) Meningomyelocele, talipes and hydrocephalus, a **malformation sequence** due to failure of closure of the neural tube and consequent effects. (c) Trisomy 13, a baby with a **malformation syndrome** consisting of holoprosencephaly, midline cleft lip and palate, polydactyly and heart defects. (d) Talipes, abnormal position of the feet, a **deformation** due to extreme lack of liquor *in utero*. (e) Amniotic bands **disruption** of a normal hand by constriction with strands of amnion leading to amputation and secondary fusion of finger tips (syndactyly). (f) Femur bones with multiple fractures and abnormal modeling due to osteogenesis imperfecta, a **skeletal dysplasia**.

Nosology (ct'd)

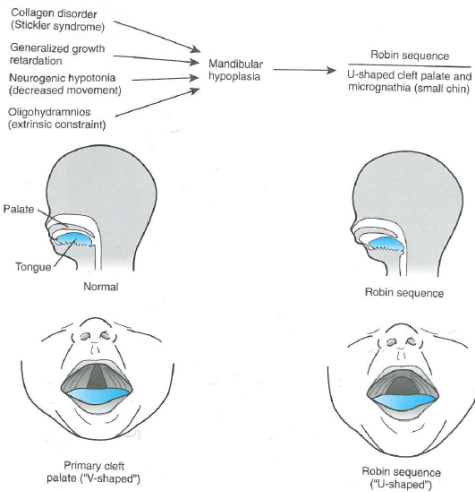

• Association

similar birth defects - different embryologic fields - inability so far to identify a genetic cause 'V.A.T.E.R', 'VACTER', 'VACTERL' cervico auriculo vertebral /'Goldenhar'

• Sequence

phenotype description of alteration of structures inside an embryonic field during development - *pleiotropic: effect on a single organ/system* - precise moment

NOT a diagnosis 'Pierre Robin', Potter'

Nosology (ct'd)

- **Syndrome**

combination of birth defects that occur secondarily to cytogenetic and/or a gene anomaly

- **Spectrum**

monogenic or cytogenetic anomaly leading to a modification in a signaling pathway during devlpt - possibly responsible for a range of signs that may be overlooked as distinct

Unique Incisor

Holoprosencephaly Sonic Hedgehog pathway *SHH, ZIC2, PATCH,...*

David Smith's contribution in 1966

- defines the distinctive clinical approach to look for distinct and/or minor signs in a patient to possibly obtain a diagnosis and orientate strategy to complete genotype definition – cytogenetic and/or molecular
- 'dysmorphologist' diagnoses a child with a birth defect, suggests appropriate work-up, guarantees follow-up and integrates pedigree and family history to published clinical reports to basic science literature

Path for reasoning

Clinical feature
of
congenital/birth defect

Clue for
syndrome identification

Orientate
Confirmatory diagnosis
Cytogenetic - molecular
cell biology - pathway

International group of clinicians working in dysmorphology

Aims:

- initiate standardization of terms used to describe human morphology
- reach consensus regarding their definitions
- increase the utility of descriptions of the human phenotype
- facilitate reliable comparisons of findings among patients
- improve discussions with other related workers (pathologists, devlpt biology, molecular genetics) which will become more precise

Dysmorphology 'textbook'

“Elements of Morphology: Standard Terminology”

John C. Carey*

« These six articles provide **recommendations for the description and definition of human phenotypic variations** ... *in the same way that the International Standing Committee on Human Cytogenetic Nomenclature accomplished this for human cytogenetics [ISCN, 2005]* the *Nomenclature Working Group proposed the description of human sequence variations [den Dunnen and Antonarakis, 2001]*

Standard Terminology

- For Head and Face: pg 1- 23

FIG. 1. An antero-posterior view of the cranium and face shows bony landmarks.

FIG. 2. A lateral view of the cranium and face shows bony landmarks.

Standard Terminology

For Head and Face

FIG. 7. *Macrocephaly*. Note the increased size of the cranium. Differences in size are difficult to appreciate but increased head size in this child is notable because of comparison with the smaller face.

FIG. 8. *Microcephaly*. Decreased size of the cranium is accompanied by marked posterior sloping of the forehead.

Standard Terminology For Peri orbital Region – pg 29-39

Eyebrows

Orientation

- high
- horizontal

An Introduction to the Human Phenotype Ontology

The Human Phenotype Ontology (HPO) intends to offer a tool that will allow large-scale computational analysis of the human phenome. The HPO currently contains over 11,000 terms, each of which describes an individual phenotypic anomaly. The terms are arranged in a directed acyclic graph and are connected by **is-a** (subclass-of) edges, such that a term represents a more specific or limited instance of its parent term(s). All relationships in the HPO are **is-a**

HPO Browser

The HPO Browser has a separate page for every term in the HPO. The following page, for instance, is for the root term: <http://www.human-phenotype-ontology.org/hpoweb?id=HP:0000118>.

PhenExplorer: The PhenExplorer has been superceded by the new HPO browser, which has all the functionalities of PhenExplorer and has additional features such as Excel-Exports

Clinical diagnostics using the HPO

Phenomizer:

The Phenomizer is available at <http://compbio.charite.de/phenomizer>.

It is a web-based application for clinical diagnostics in human genetics and semantic similarity searches in ontologies [Köhler et al., AJHG, October 2009](#). The Manual for the Phenomizer can be

Catalog – Features on keywords

Insert/select keywords based on features

The screenshot shows the Phenomizer interface. On the left, the 'Features' tab is active, displaying a table of HPO features. A search bar at the top of this section is highlighted with a blue arrow. On the right, the 'Patient's Features' panel is visible, with a dropdown menu for 'Feature' and a 'Modifier' dropdown highlighted with a blue arrow. A large text overlay in the center reads 'Select if 'keyword' 'observed' vs 'mandatory''. Below this, a 'News' window is open, containing information about the Phenomizer tool and its development by Sebastian Köhler, along with citation information.

HPO id.	Feature.
HP:0010704	1-2 finger syndactyly
HP:0005767	1-2 toe complete cutaneous syndactyly

Info

- The Phenomizer is developed and maintained by [Sebastian Köhler](#) (see [group website](#) for more info).
- The [Phenomizer_Orphanet](#) uses the latest Orphanet date and a different algorithm for ranking the differential diagnoses.

Please cite the following papers when you use this tool/HPO in your publications.

Tool IV - 'Syndromology'

derived from syndrome: clinical approach to occurrence
multiple congenital anomalies

Ped Cardiology clinic

First description

9 patients with pulmonary valve stenosis, short stature

Hypertelorism, mild intellectual disability and ptosis cryptorchidism, 'skeletal malformations'

Noonan J and Ehmke D. J Pediatr 1963;63:468-470

Noonan JA. and Lexington K. Am J Dis Child 1968;116:373-380

Variability in phenotype

Large front, hypertelorism; down slanting palpebral fissures,
low set posteriorly rotated ears

Remnant of prenatal nuchal translucency and hygroma

pectus carinatum

Distinct patient...similar dysmorphic features

Large front, Hypertelorism; down slanting palpebral fissures, low set posteriorly rotated ears

and variable degree of lymphedema (unconstant)

pectus carinatum

...similar phenotypes

Same syndrome...

8 months

4 years

Congenital heart defect « pulm atresia»

IUGR

Hypertelorism

Macrocephaly (relative)

Curly hair

Failure to thrive

...

Evolving phenotype with age

...Knowledge on natural history

...to adulthood

...to adulthood

- Sporadic
- Pulmonary valve stenosis
